Network technology

from Murrelektronik

MURR ELEKTRONIK

stay connected

INDUSTRIAL COMMUNICATION NETWORKS ARE THE BACKBONE OF DIGITIZATION

Machine and system communications are rapidly increasing. Networks act as a lifeline for data streams. To guarantee successful digitization you have to have powerful and reliable network technology. You need to ask if the communication network is strong enough to handle the increase in flexible applications and find out what the prerequisites are to reliably network a combination of classic and/or digital devices. Finally, you need to know if the application is ready for future advances in data communication.

The design, planning and implementation of industrial communication networks requires an in-depth knowledge of automation technology and takes into consideration the main requirements for networking data - reliability, openness and flexibility.

Murrelektronik knows it is not only the ability to provide components, which range from basic switches all the way up to the latest in POE technology and the cables to connect them, that matters but also the ability provide support and tips to help our partners optimize data flow while reducing their wiring efforts.

Sharing knowledge, presenting options (including their pros and cons) and explaining the „point of use" for the components allows you to see industrial networks as a whole and highlights the added value of the chosen solution.

SYSTEM NETWORKING VS. REQUIRED NETWORKING

Today's production facilities have to be flexible and easy to change. As a result, the design of the network topology is key to ensuring the data-related functional reliability of the machines and systems and to make sure it is in line with current requirements. It is also important to check the concept for redundant connections through continuous segmentation and unrestricted access to the higher-level networks

In addition to being open and flexible, Industrial networks have to be designed to match the application. Individual factors selected by the end users like digital sustainability and enhanced diagnostics determine the right network topology.

OVERVIEW

CHOOSING THE RIGHT SWITCH

MANAGED SWITCHES

Profinet managed switches
- Easy implementation via TIA portal with the help of a GSDML file
- On device replacement, automatic device integration via PROFINET baptism
- Full switch integration as PROFINET device
- Implementation of ring structures via MRP ring formation
- Comprehenisve diagnostic options thanks to an integrated web server, network tools and automatic topology detection
- Neighbor detection

Managed Switches
- Easy setup via the web server
- New devices are created in the web server via a configuration file
- Priorization of PROFINET telegrams

UNMANAGED SWITCHES

- No programming required. Just plug and play
- Fastest setup
- Easy device replacement
- Inexpensive
- Wide range of options
- Prioritization of PROFINET telegrams to IEEE 802.3x
- Ethernet/IP-enabled
- IP20 and IP67 versions available

Tree PoE Switches
- 24 V and 48 V Operating voltage
- PoE+ up to 25,4 Watt

MANAGED SWITCHES
– CONNECTIVITY FOR
INDUSTRIAL APPLICATIONS

Managed switches, on the other hand, offer extensive possibilities in port and device configuration. They assume important functions for error analysis, network diagnosis and redundancy mechanisms. These switches optimize data transmission but increase the configuration effort and thus the overall costs. However, their use in a network offers advantages that provide more control including when remote access is required.

- **Mirror ports** enable access to network data communication for logging data strings – via a free switch port. Users can take the data for analysis. Errors, the source of costly downtimes, can thus be avoided through predictive maintenance, and in addition, the machine can better utilized**.**

- **Prioritized Data Transfer**
  PROFINET data packages are prioritized within a network and thus transferred by the switches with greater reliability. Performance is increased by focusing on the real-time application of relevant data.

- **Automatic PROFINET Naming**
  The control system names each device within the PROFINET topology. If a device is replaced, all of the data required for resuming operation is automatically carried over to the replacement device via the control system. This saves time as the individual components do not have to be manually configured before operation resumes.

MRP RING FORMATION

Profinet managed switches can be integrated into a network as a slave. This makes redundant wiring and failsafe operation possible. If the data communication path is interrupted, devices in the communication chain are served by the other side of the ring.
■ **Neighborhood detection**
Components support LLDP (Link Layer Discovery Protocol). They periodically send and receive information about themselves. In this way, the network topology is documented and stored in neighborhood tables.
All users receive the protocol and share information about their neighbors, while PROFINET users enjoy a corresponding overview of their topology. Device failures are picked up by the neighborhood detection function.

If a Profinet managed switch is included in the topology, device replacement is tool free. The replacement device is identified and configured automatically. This method is part of the overall „device replacement without engineering tools" concept.
CENTRAL INTERFACE

Murrelektronik's efficient switches play a key role in PROFINET installations. Besides linear structures, they also enable star, tree and ring topologies.

■ **MRP ring formation as a slave**

■ **Mirror ports**

■ **Optimized data transfer via prioritization**

■ **Automatic PROFINET Naming**

■ **Neighborhood detection**

RSTP – RAPID SPANNING TREE PROTOCOL

RSTP is a network protocol using in local networks to deactivate redundant paths. If necessary, these paths can be reactivated. In RSTP protocols, failure no longer affects the entire network structure, but is now confined to defective inaccessible paths. Intact paths remain up and running while the new topology is calculated. This ensures that only one active path exists at any time between two end devices. If it cannot be used, the protocol automatically falls back on the deactivated path ensuring high network availability.

UNMANAGED SWITCHES

Unmanaged switches provide Ethernet devices with network connections so that they can communicate with each other. As intermediaries, they add additional ports to the network, do not provide intelligent functions, nor can they control network traffic. In industrial environments, unmanaged switches are often used in small networks.

IP67 Unmanaged Switches

Murrelektronik's IP67 switches have a compact and very robust housing. These switches can also be powered directly via an output port from fieldbus modules such as Impact67, MVK Metal or SOLID67.

PoE Unmanaged switches

The PoE Switches are available for any PoE application, no matter whether 24 V or 48 V operating voltage. With up to 25.4 W at one port, all PoE+ subscribers can be supplied. In addition, they offer a high data transmission rate of 1000 MBit/s.

i XELITY®

Although developed and produced in Germany **Xelity®** series switches are inexpensive. Once complete, the series will include managed and unmanaged switches with a choice of 4, 6, 8, 16 or 24 ports in a compact housing. The switches have a similar housing with push in terminals for the power connection that make installation simple. They are resistant to EMC influences and are able to be redundantly supplied with power to ensure system availability. They prioritize Profinet protocols while transferring data packages of up to 100 Mbit/s. The high temperature range (-25 to +60 °C) and UL listing allow for worldwide usage.

MADE IN GERMANY

Xelity switches are produced at Murrelektronik's headquarters in Oppenweiler. We adhere to a zero error policy in all areas and continuously invest in machinery, systems and quality control to further develop and improve technical processes. By involving our suppliers and consistently implementing process optimization measures, we produce high quality, state-of-the-art products.

## GIGABIT SPEED DATA TRANSFER WITH 8-PORT SWITCH (ART. NO. 58173, 58176)

Murrelektronik's 8-port gigabit switches allow you to integrate devices, like vision cameras, that generate high volumes of data into your system. The gigabit switch also supports jumbo frames (up to 9216 bytes) and Vlan prioritizing to IEEE 802.3x standard.

NOW AVAILABLE IN A 16 PORT VERSION!

- **16-port unmanaged switch with Profinet prioritization**
- **2 gigabit Ethernet uplink ports and 14 fast Ethernet downlink ports**
- **Redundant power supply and a metal housing**

IP67 CONNECTIVITY

- **4 or 8 M12 ports (d-coded)**
- **EMC Resistant Housing**
- **Vibration-proof**
- **Wide temperature range (-25...60 °C)**
- **Profinet prioritization (QoS IEEE 802.1q)**
- **Redundant power supply (18...30 V)**

Gigabit-Camera

ProfiNet-Camera

Vision-Sensor
XENTERRA SWITCHES

Murrelektronik has expanded it's switch portfolio with the new, compact Xenterra switch family. They are characterized by their flat yet robust design.

Xenterra is available in 5, 8 or 16 port versions allowing you to select the right sized switch for your application.

The switches can be either DIN rail or wall mounted which further reduces the space needed for installation.

The transmission speed of all Xenterra switches is 100Mbit/s.

SMALL DIMENSIONS ENABLE NEW APPLICATIONS:

- **They can be cleverly integrated into machines with Panel PCs.**

- **They are suited for use with self-propelled transport systems (AGV) – the switches are screwed directly to the wall.**

- **They are ideal for small terminal boxes and narrow switch cabinets.**

TREE PoE SWITCHES

Power over Ethernet provides a significant installation advantage. PoE cameras or PoE Panel PCs, which previously required one cable for power and one cable for data now only need a single cable for power and data transmission.

PoE switches are a must for reducing your wiring efforts. Murrelektronik's TREE series is made up of 5 to 8 port switches that have the option of supplying both 24V and 48V allowing users to select the switch that best meets their needs.

Another advantage – our TREE PoE switches use standard 8-pole RJ45 cables.

Designation	Xenterra 8TX GE	Xenterra 8TX GE WM
Ports		
Fieldbus	8× RJ45	
Supply Switch	Push-in spring terminals, 0.2...2.5 mm² (0.25...1.5 mm²)	
Technical data		
Operating voltage	8...28 V AC/9...36 V DC	
Transfer rate	10/100/ 1000 Mbit/s full duplex	
Operating mode	Autocrossing/Autonegotiation	
Switch Management		
Web server	no	
VLAN (QoS) IEEE 802.P	yes	
Port Mirroring	no	
Protocols	no	
Remote maintenance	no	
Alarm contact	no	
Fieldbus	Profinet, Ethernet, Ethernet/IP	
General data		
Protection type	IP20	
Enclosure	Metal black	
Montage	snaps onto TH35 mounting rail (EN 60715)	Wall mounting M4 hole, round head screw
Temperature range	-40 to +70 °C (storage temperature -40 to +85 °C)	
Dimensions H x W x D	105×42×32.5 mm	
Weight	255 g	
max. operating height	3000 m	
Power consumption	1,15 W	
Diagnosis		
Communication status	per LED	
Monitoring – no voltage	yes

FIELDS OF APPLICATION

Switches play a number of roles in installations.

They link PLCs with Ethernet users and they are also used in fieldbus applications to connect a wide range of modules.

NAT SWITCH

NAT function
NAT = Network Address Translation

Address conflicts occur when machinery and modules have the same address in a company network.

NAT switches are used to separate IP address ranges.

Only the requested server can set up data communication with a machine.

Other servers sending data to the switch are blocked by the firewall to suppress network attacks.

SM-R MANAGED SWITCHES

Yacoub Automation GmbH's SM-R etherRAIL managed switches are specially designed for use in harsh environments. The components are available in 8 x 100 Mbit and 8 x 1 Gigabit versions with M12 ports. SM8+2TX R PoE+ switches will be added to the family soon.

The devices are ideal for use in buses and trains as well as for cost-effective construction and expansion of decentralized industrial Ethernet networks.

The SM-R series supports full network management via SNMP and has an integrated web server for extensive configuration and diagnostics. The implemented protocols are BootP, SNMP (v1, v2, v3), RSTP, LLDP, NTP, DHCP, DHCP Option 82 and DCP.

Their compact design and IP54 rating allow the devices to be used outside the control cabinets without any problems. The switch can be installed in most any environment as it's temperature range goes from -40 to + 70°C.

M12 CONNECTORS FOR ADVANCED INDUSTRIAL ETHERNET APPLICATIONS

Murrelektronik's X-coded M12 cord-sets are the solution for error-free, high-speed data transfer at speeds of up to 10 gigabits per second.

A metal cross (X-shaped) in the connector safely separates the four data pairs from each other while the internal shielding protects the cable from external interference.

The combination of our X-coded M12 connectors with highly resistant PUR cables equals a cordset designed for industrial applications.

X CODING

■ **Increased requirements**
The demand for higher transfer rates is on the rise in industrial Ethernet applications. The best example of this are high speed vision systems, which generate a large volume of data. These cables are also becoming more common in standard installations as well.

Murrelektronik's high quality industrial M12 connectors are the right solution.

■ **10 Gbit/s data transfer rate according to Cat. 6A (ISO/IEC 11801)**

■ **Soldered shield connection between cable and connector**

■ **360° shielding end to end**

■ **IP65/67 rating**

M12 CONNECTORS FOR ADVANCED INDUSTRIAL ETHERNET APPLICATIONS

Murrelektronik's Y-coded M12 cordsets transfer data and power in one connector.

The metal "Y" in the connector separates the four power transfer contacts from the four signal contacts in the pin arrangement making it possible to transfer up to 100 megabits per second of data while also providing 2 x 6A power.

Our Y-coded M12 connectors are combined with PUR cables making them suitable for a wide variety of moving applications.

Y
CODING

- **Increased requirements**
  In industrial Ethernet applications, companies are focusing increasingly on installation costs. Single cable transmission of power and data helps reduce both the number of components required and costs.

  Murrelektronik's high quality industrial M12 connectors are the right solution.

- **Parallel transfer of data and power with one connector**

- **Data transfer according to Cat. 5e (ISO/IEC 11801, Class D)**

- **Provides 2 x 6A power**

- **360° full shielding**

- **IP65/67 Rated**
